

Client Log:

Meeting @ 8/26/22 3:00pm (~32 min)

Meeting starts off with an introduction of the team members and client. The first couple of questions were about the design and layout of the application. Client stated that both aspects of the app were up to the team, but that the GGC green color would have to stay. Client specified that the research forms should allow the signatures to be typed in. Application pages should include a link to STEC research organizer email for any questions or thoughts. Client also wants to get notified about new form entries from the admin page and the ability to search for forms using keywords. Submitted and signed-off forms should also be accessible. A new form for STEC 4200 will also be included. Team asked about a timeout functionality and the client wants a 30 min timeout for security. A save functionality would be needed and the client requires GGC email/password authentication in order to sign in. Client will send information about the new STEC 4200 form to add to the app.

Meeting @ 9/23/22 4:25pm (~30 min)

We first show the updated mockup html pages to the client. First we show the admin page. Make the deny and delete button separate in the admin page. Include advisor email entry in the form. Only the student can enter in the student signature and not in the advisor entry. Client likes the structure and design of the mockup so far. Next we showed the main landing page and student page. Showed updated STEC coordinator dashboard. In the landing page client wants: organize/search by discipline in the available projects panels for the year (and alphabetically) and add mentor email addresses in the panels. Client will send feedback to the instructor.

Meeting @ 10/14/22 3:10pm (~30 min)

The team presents the state of the application to the client and she is pleased with the results. She states that the layout and design of the project is good and wants to add some minor details to it. She would like separate pages for the user to know class requirements, enrollment instructions, and about previous projects along with a Q and A page. We have agreed to create the basic structure of these pages as we have a limited time left to complete the iteration. Client also wants some minor improvements to complete the forms such as highlighting any required entries as well as adjusting the form when a user chooses an option.
